On December 22, 2017, the United States enacted tax reform legislation through the *Tax Cuts and Jobs Act*, which significantly changes the existing U.S. tax laws, including a reduction in the corporate tax rate from 35% to 21%, as well as other changes. As a result of enactment of the legislation, the Company incurred an additional one-time surplus decrease of \$2,015,301 during the 4th quarter of 2017, primarily related to the remeasurement of certain deferred tax assets and liabilities.

The Tax Cuts and Jobs Act of 2017 provides for a change in the methodology employed to calculate reserves for tax purposes. Beginning January 1, 2018, a higher interest rate assumption and longer payout patterns will be used to discount these reserves. In addition, companies will no longer be able to elect to use their own experience to discount reserves, but will instead be required to use the industry-based tables published by the IRS annually; however, the 2018 tables have yet to be released. Consequently, the company cannot reasonably estimate the impact this would have on deferred taxes at December 31, 2017.

- E. Other Disclosures:
- a. As of December 31, 2017, the Company had net operating loss carryforwards of \$12,187,467.

An asset’s or liability’s classification is determined based on the lowest level input that is significant to its measurement.

For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level3). The levels of the fair value hierarchy are as follows:

Level 1: Inputs are unadjusted, quoted prices for identical assets or liabilities in active markets at the measurement date.

Level 2: Inputs are other than quoted prices included in level 1 that are observable for the asset or liability through corroboration with market data at the measurement date.

Level 3: Inputs are unobservable and reflect management’s best estimate of what market participants would use in pricing the asset or liability at the measurement date.

Fair value of actively traded fixed-income and equity securities is based on quoted market prices. Fair value of inactively traded fixed-income securities is based on quoted market prices of identical or similar securities based on observable inputs like interest rates using a market valuation approach is generally classified as Level 2. Investments measured based on the practical expedient being net asset value (NAV), based on the NAV of the fund as provided for in the audited financial statements and other fund reporting, are generally classified as Level 3.
